

Nerddy

PROFILES API

About the API

Each user on Nerddy has a global profile and an app profile. The Profiles API allows apps to store user data on Nerddy for display on the user's app profile. The data can be accessed through the notifications system through the user tags.

Authentication

- Requires appid and accesskey.
- Requires platform granted permission to use the API

Limitations

- One record is allowed per user. New submissions for the same user replace previously stored data.
- No JavaScript or PHP is allowed.
- Data may not contain advertisements of any kind.

API URL

<http://www.nerddy.com/beta/profiles/v1>

Supported Methods

POST

Request Format

Here is a sample request body:

```
{"appid":"xxx","accesskey":"xxx", "requestid":"xxx","userid":"xxx",  
"profilebody":"<contains-html>xxx</contains-html>", "onlistsummary":"<contains-  
html>whatever</contains-html>"}
```

appid	Your app's parent (global) app ID
accesskey	Your parent app's access key
requestid	A random integer (required for reference)
userid	The ID of the user (varchar)
profilebody	Specify what to display on the user's profile. This may contain Nerddy Mark-Up, HTML, and CSS.
onlistsummary	Specify the summary to show for the user on

	user lists. May contain HTML and CSS.
--	---------------------------------------

Response Format

The response will return the status of the request.

```
{"requestid":"xxxx","result":"success","error":null}
```

Displaying Profile Data and Creating User Lists

Please refer to the Notifications API manual.
